```
> libname;
```
"C:\Program Files\Maple 13/lib", "C:\Program Files\Maple 13/mylib"   **(1)**

libname should contain the name of your local maple library directory.
This is set by the initialization file maple.ini which is in the directory
C:\Program Files\Maple 13\Users

```
> currentdir();
```
"C:\Program Files\Maple 13"   **(2)**

This lists the current directory. We change the current directory to the
directory which contains the file wmprog.txt

```
> currentdir("H:\\maple\\mypackages\\qseries\\wmprog");
```
"H:\maple\mypackages\qseries\wmprog"   **(3)**

```
> currentdir();
```
"H:\maple\mypackages\qseries\wmprog"   **(4)**

```
> read "wmprog.txt":
```
No error was produced. Quit and restart maple to test the package.
